0580_w18_qp_43_Q5

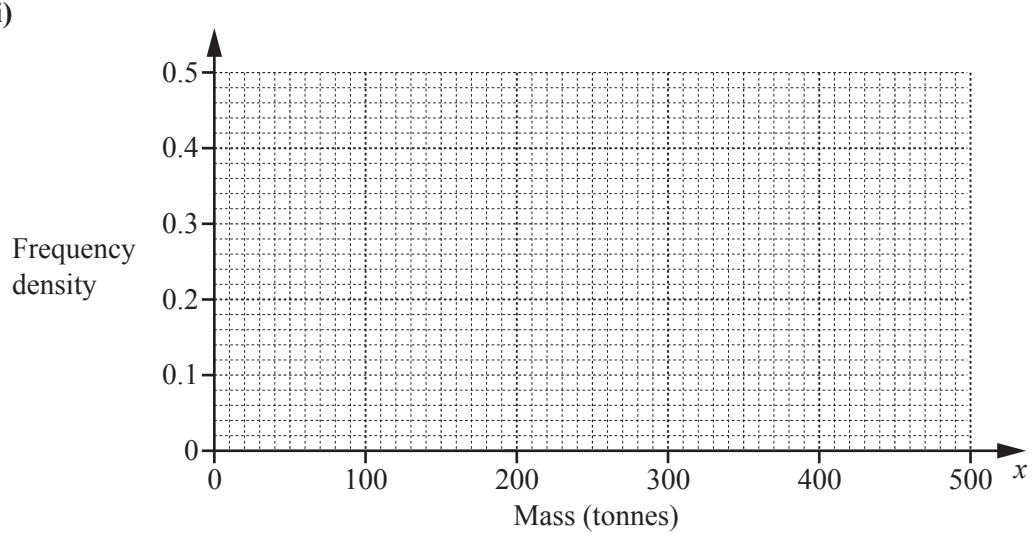
5 **(a)** A factory recycles metal.
The mass, x tonnes, of metal is measured each week.
The table shows the results for 52 weeks.

Mass (x tonnes)	$100 < x \leqslant 200$	$200 < x \leqslant 250$	$250 < x \leqslant 300$	$300 < x \leqslant 500$
Frequency	8	20	12	12

(i) Calculate an estimate of the mean.

..... tonnes [4]

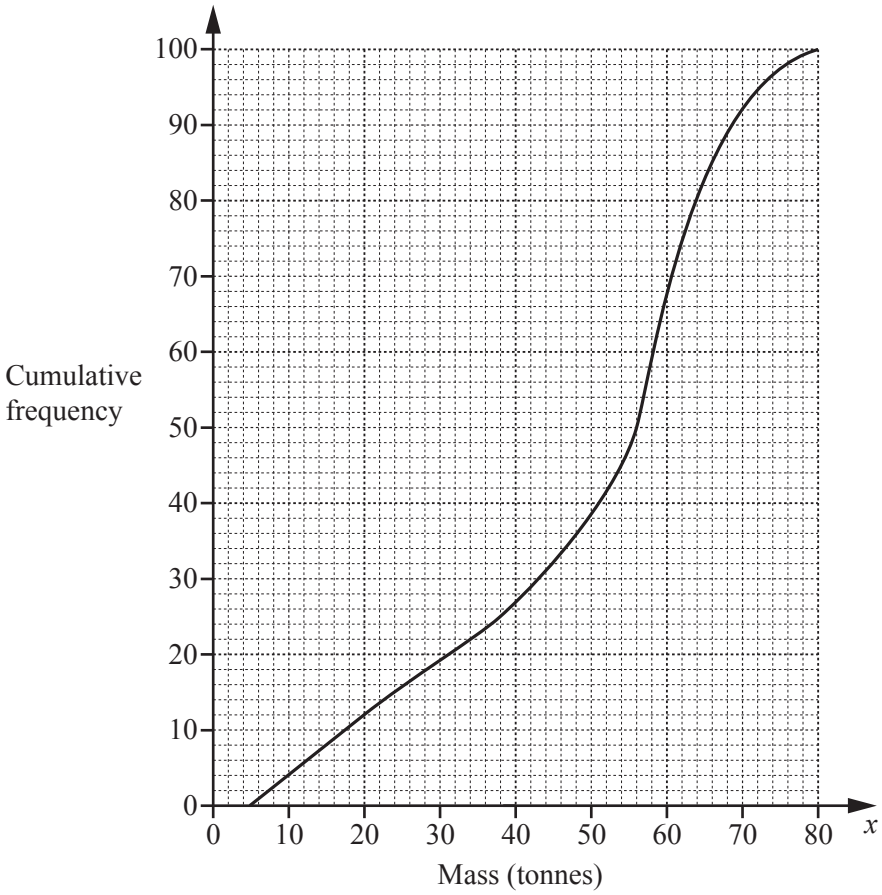
(ii)



On the grid, draw a histogram to show the information in the table. [4]

0580_w18_qp_43_Q5

(b) Another factory also recycles metal.
The mass, x tonnes, of metal is measured each day for a number of days.
The cumulative frequency diagram shows the results.



(i) For how many days was the mass measured?

..... [1]

(ii) Find an estimate of the median.

..... tonnes [1]

(iii) Find an estimate of the upper quartile.

..... tonnes [1]

(iv) Find an estimate of the interquartile range.

.....tonnes [1]

(v) Find an estimate of the number of days when the mass was greater than 20 tonnes.

..... [2]
